

EXTRACTS From an unpublished Tragedy. BY GEO. W. REEDER. Memory. Oh, that memory were a desert spot, On which no fertile plant could bloom For when we conjure up the faded flowers

Of days long past, They but too plainly tell us, Twill take an Elysian spring To make them bloom again!

Tears are like the warm rains of spring, They ope the frozen regions of the heart, And make many a tender scion shoot forth Which had almost wither'd on the parent tree.

Calumny. Oh! she was beautoous, like a fragile flower Blooming on an casis, When calumny,

And blighted all its sweetness! ENGLISH CHARTIST'S HYMN. God is our guide: from fields, from wave, From plough, from anvil, and from loom, We come, our country's rights to save; And speak a tyrant faction's doom.

We raise the watchword liberty!

We will, we will, we will be free!

In sirec power, like a simoon came,

God is our guide: no swords we draw, We kindle not war's battle fires; By reason, union, justice, law, We claim the birth-right of our sires. We raise the watchword liberty! We will, we will, we will be free!

AGRICULTURAL.

FROM THE SOUTHERN AGRICULTURIST.

CULTIVATION OF IRISH POTATOES. Potatoes delight most in rich loam, but not too moist. Wet land produces too much top and watery fruit, which will not keep through the winter, and is always strong and unpleasant to the taste. Very dry land prothat is apt-to bake (as we commonly phrase it,) should also be avoided.

For this crop, the earth should be well ploughed, so as to pulverize and clear it of weeds. It should have nothing about it to shade it-a great error in the cultivation of potatoes is, too much hilling of them. I have tatoes are planted in a mellow soil, they need scarcely any hilling. They will bed themselves at that distance from the surface of the ground, which gives them the greatest advantage to procure nourishment. This depth, I have observed, is generally about four inches; and this depth the plant finds by something which I shall venture to call instinct. If the earth in which you plant potatoes should be hard, and not yield to the pressure of the roots, if will then be necessary to hill them, but great care must be taken not to hill them too much: never let them be covered above four inches; and this hilling must be given with discretion; for if they have bedded themselves (as they will in mellow land) four inches, and you add four inches more of earth, you suffocate the fruit. Take an example; potatoes, just as they begin to blossom, begin to form their bulbs .-If you leave them now, the fruit will grow rapidly; but if you should add earth to the hill, the young buibs for the want of that air which can pervade four inches of earth, will cease to grow, and others will sprout above them; and this will be the progress of nature so long as you continue to burden them with earth. Therefore, to procure an early crop of potatoes be sure to give them your last earth as soon as the plant is big enough to receive it. When they know (excuse the expression) that you have left your earthing, they will begin to vegetate, and increase with great rapidity, but will make no progress while you keep burdening and stifling

A word relative to the time of gathering this crop must conclude these remarks .-Every production of the earth has its maturity. If you harvest potatoes before they are ripe, the juice will be crude, they will be unpleasant to the taste, and will not keep so well as if suffered to grow longer. The sign of ripeness in this fruit, is the fading of the leaf, and shrinking of the stock. This is remarkable in almost all bulbous roots, especially the onion and potato, that they receive their first nourishment from the root, and finish their growth by what they receive from Pendleton District, S. C. 1839. EXPERIENCE.

them. Thus much as to the culture.

FROM THE SOUTHERN AGRICULTURIST. PREPARATION OF COTTON SEED

FOR PLANTING. aware, that in planting his seed, many of a of his, which I have mentioned as having defective kind are put into the ground .- something of the disease in February and These have enough of vitality in them to nearly recovered, to that calf he fed a quart a These have enough of vitality in them to wearly recovered, to that calf he fed a quart a beyond the limits of this State; It is therefore order sprout; but the plants from them are always day, mixed with bran to induce the calf to eat ed, that publication be made for six successive weeks

at the trouble of selecting their seed one by one, which, though a very good plan, is too tedious for general practice. Their plan is From the above circumstances, and the

men, appearances deceive. A more simple, produced by spear grass is harmless, although more expeditious, and surer plan for select-that of rye is well known to be poisonous. ing good seed, is to procure a large tub, fill The affect of the disease, I believe, is in half full; into this drop (holding it as high as as far as I have observed, the outside claws you can) one or two quarts of cotton seed at are more apt to be affected than the inside ones will float on the top of the water. These but have known instances of their losing the should be skimmed off with the hand. Con- outside claws and the inside ones remaining described, until you have collected as much the most exposed to the cold, and taking the

seed as you want. be left in the tub of water during the night; ly by trost; but the observation and experience but if the weather be warm, and the land of some other person may alter that opinion; dry, I would not advise doing so, unless the I shall be quite willing to alter it whenever water has been well salted. The salt on the good cause is shown for doing so. seed is a great help, it will attract moisture to the earth around the seed, and thus cause more prevalent last winter than the preceedthem to germinate much sooner. If any one ing, the weather, I believe, was not quite as wishes to be convinced of this, let him, in cold, but it may be possible that the sudden dry weather, sprinkle a little salt upon a changes, together with the excessive rains of piece of ground, and examine it next morn- last winter, might have had some effect. ing. While all the earth around will be apparently parched, the salted ground, from having attracted moisture during the falling of the night dews, will appear actually wet.

Your obd't. serv't., A COTTON PLANTER.

From the Genesee Farmer. HOOF-AIL.

Mr. Tucker,-Although there has been much said about the disease called hoof-ail, yet I think we have not arrived at the point you are at liberty to do so, but I doubt whethwhere it will be no longer necessary to in-vestigate the subject. It is a disease with which many of us have had some practical acquaintance for the year past; and if every person will take the trouble to inform the public whatever he has learned by observation respecting it, it may possibly be ascertained that may be necessary, say one hundred and what is the cause of the disease, when the twenty or thirty gallons. Take out both difficulty of effecting a cure will be partially heads and nail a sufficient number of slats

Although I have learned but little respecting the cause, and less about the cure, I have ground, at any convenient place, two feet concluded to communicate that little, hoping deep, and about eighteen inches wide, in others will do the same, and the desired result

this vicinity the past winter, and the first ob- slats, as many as may be necessary; cover ject of my inquiry and observation, was to the top that the smoke may be kept in, and and on examining the hay which was eaten cured in one day. by the cattle that were effected with the disease, I found in some instances a great quantity of ergot, and in others none at all, One man fed his cattle wholly on timothy, in which there was none of that substance, and another fed on clover in which there was none, and I was told that one man whose cattle were effected, fed wholy on straw.

The first instance of the disease which came within my observation, was a near when the other was taken lame, I saw them; the one that was taken first was then quite lame, the hoofs on both hind feet were loosened from the skin at the top, and appeared on the point of coming off, and the other calf being so little affected, we concluded to try to cure it; and having heared of cutting into the back part of the ankle and taking out a small of the very variety of types and printing materials of the very best quality, such as cuts and newspaper found, by many years experience, that if po- back part of the aukle and taking out a small bladder of liquid, we operated as nearly ac-bladder of liquid, we operated as nearly ac-ornaments in great variety: Flowers and Borders, cording to the directions published in the Genesee Farmer as we could, and took out the bladder on one foot, when we became convinced that it could do no good. It being sound below the skin, and that liquid appeared to be placed there for useful purposes, we let the other foot be without cutting, only we cut off the ends of the toes on both hind feet, and found the outside claws so much affected that they would not bleed, and the inside ones not affected at all; we put on spirits of turpentine then, and a few times afterwards, and the calf was put in a warm stable and soon recovered so as to be but a little lame, and I think will not lose even the hoofs which were affected; the one not cut seemed to do the best. I am confident cutting did no good, and I cannot determine whether spirits of tur. pentine was beneficial.

I have seen several cattle which were taken lame since the first of April, when the weather was not cold.—Whether their disease was not cold.—Whether their disease was Anker Bolting Cloths. Which will be sold the hoof-ail, I do not know. The skin was very much inflamed and swollen between the hoof and dew claws. I cut through the skin in one instance, and found the disease went no deeper, and we applied spirits of turpentine to that which we cut and to several others, and they all recovered soon. I am not certain that the cutting or dressing did any good. I believe the remedy prescribed by Mr. Palmer of cayuga county, (salt and water,) would be quite as likely to answer the purpose; it seemed to be an inflamation in the skin only. his late Spring stand. I have never known any cattle taken in that way and at that time, but soon recovered if they had nothing done for them.

Many of the cattle that I have seen, which were troubled with the disease, were kept in places which were so much sheltered from the wind and storm, and so much straw to lie on, that it seemed as though they need not freeze; but I saw none but what had been kept were they might have frozen. I have known but one animal affected with the disease which it worthy of patronage. was stabled, and that one lay next to a door under which there was an opening of several inches, where the cold air had free access to the hind feet, which are so much affected that

they will all come off. After the cold weather was nearly gone, about the first of April, I procured some ergot of spear grass, and after cleaning it as much as I could from other aubstance, I had a bushel Mr. Editor:- Every cotton planter is of it, which one of my neighbors fed to a calf defective, and never mature their fruit as well as plants from healthy seed.

it until the calf had eaten the whole of the bushel of ergot, and we have not been able to discover any effect that it had on the calf; in its
